

#500recycledmemories

Following the success of our previous years projects; #500recycledelephants #500beesbugsandbutterflies. #500migratingbirds we are pleased to announce that this year's recycling project is called #500recycledmemories. Children have learnt how to make pockets from folded paper that would have been put into the recycling bin. We are then hoping that they will work with older members of their families and teach them how to make them. Whilst making them we are encouraging the children to talk to their relatives and write a memory on a recycled piece of card. These will be collected and displayed in school. In assembly this week we briefly discussed Dementia UK and how older relatives might forget things that have happened recently but remember things from the past.

Step 1

Take a rectangle of paper. It can be wrapping paper, newspaper, a page from a magazine or A5 paper. Fold over the top of the longer side.

Step 2

Turn the paper over and place the folded edge near to you. The paper needs to then be folded into 3.

Step 3

Tuck one of the folded edges under the other. You should have a tube that you can see through.

Step 4

Fold the paper into half. Again, tuck the edge under the fold and you have a pocket.

Step 5

Cut some card to fit into the pocket. Write a memory on it and place into the pocket.

Step 6

You can decorate your pocket how you wish. You could add the #500recycledmemories to it and/or your name and class.
